2014–2020

Game on!

The six largest cities in Finland (Helsinki, Espoo, Vantaa, Tampere, Turku and Oulu) want to support the development of new user based services by arranging an open data innovation competition.

The aim of the DataBusiness Challenge is to encourage developers, entrepreneurs and startups to start utilizing the existing open datasets and APIs provided by the six cities.

We are looking for proposals for 1) the competition and 2) the experimental phase – you can submit your solution for both call!

The deadline for submissions is 30th January 2017.

**DataBusiness
Challenge**

3.10.2016–30.1.2017

Challenges

Active citizen 4500€

Create idea or solution that enhance the everyday life of the city dwellers and activate their participation in city development. How to create better services to the citizen and challenge them to also use them more frequently?

Functional city 4500€

Create concepts or solutions that enhance the usage of information in decision making. How can we make functions of the city more agile and develop the information flow inside and outside organisations?

Prize categories

Services in the city?

How to make it easier for residents to find the public services? Create app/solution that offers relevant information for the certain target groups. E.g. app for youngsters to find information about the youth centres, events, hobbies or jobs. Or could your solution active people to exercise more or use the cultural services in the city?

Useful open data e.g.

- Helsinki metropolitan area Service Map REST-API
- Linked Events API (Helsinki, Turku ja Varsinais-Suomi)
- Food establishments in Helsinki
- Regional statistics API
- The Business Information System (YTJ)
- Snow plows API
- Parking data
- Register of public areas in the City of Helsinki
- Public transport data
- Metropolitan area travel time matrix
- Solar energy potential, green roofs...

The whole city as a learning space?

Learning shouldn't be tied to the school buildings but we should use the whole city as a learning space. For instance we could utilize geospatial data in learning natural environment. This could inspire pupils to learn more about the environment and act more sustainable way.

Useful open data e.g.

- geospatial data sets
- natural and cultural points of interest
- statistics, historical data sets
- predictions
- events
- service points
- public resources like available meeting rooms

Contact person:

City of Helsinki, Education department

pasi.silander@hel.fi

soili.haapala@hel.fi

City as a playground?

City has a soul and it lives its own life. In the movies and tv series the city is often described as a one figure. Create a fun and addictive mobile game that helps players to know and feel the city environment and amenities better. If possible utilize virtual and artificial reality opportunities.

Useful open data e.g.

- 3D city models
- Aerial photographs and orthophotographs
- Historical maps and photos
- Sporting places and routes
- Service points
- Buildings
- Events
- Public transport

Dashboard for business services?

Contact person:

NewCo Helsinki

Henrik.keinonen@hel.fi

Teemu.polo@hel.fi

Create a service that helps companies and investors to find information about the cities as easily as possible. In which district you should start your business? Where are the potential customers? What information do companies look for? How to provide the information for entrepreneurs about the available human resources in the region?

Useful open data e.g.

- geospatial data sets
- buildings
- land-use data
- population prognosis
- traffic data
- the Business Information System (YTJ)
- statistics
- tourist data

Empower youngsters?

Kuva: RuutiExpo2015

Contact person:

City of Helsinki, Youth department

soili.haapala@hel.fi

Create an app or a game for youngsters that help them to know and influence the city decision-making. Your solution empowers young people to take part in the planning and development processes of the city.

Useful open data e.g.

- decision-making data
- issue-reporting data (feedback data)
- geospatial data sets (e.g. school service areas)
- events
- information regarding Ruuti system
- budget data, subsidies
- statistics (number of pupils, population)
- predictions

#helpalaute (social media bot)?

- City of Helsinki is looking for a social media bot to monitor how the #helpalaute (palaute = feedback) keyword has been used in Twitter, Facebook and Instagram
- The bot should open up an automatic ticket for the city via Open311 API and send feedback to the monitoring page
- It should post an automatic update information to the discussion immediately after someone has answered to the feedback
- The aim is to test this kind of bot in the feedback process in March

#helpalaute (social media bot)?

Could you consider a better box to the dog park in Keskuspuisto? @Rakennusvirasto?

You should send a feedback about this to the city organisation #helpalaute @punteri @Rakennusvirasto

This feedback has been registered in the issue reporting system of Helsinki! Follow the process: hel.fi/www... @minna_h @punteri @Rakennusvirasto

This feedback has got an answer: hel.fi/www... @minna_h @punteri @Rakennusvirasto

Contact person:

City of Helsinki, Executive Office

Joonas.Pekkanen@hel.fi

City Experiments

DataBusiness
Challenge

3.10.2016–30.1.2017

Companies, would you like to try out your open data solution in practise?

The cities of Helsinki, Espoo, Vantaa and Tampere are also willing to offer 25 000€ (max 5000€ per pilot) for experiments organized by companies during the spring 2017.

The cities have announced a procurement process for the experiments and the deadline is 30th January 2017. So, you can submit your solution both 1) for the competition and 2) for the experimental phase!

More information and the entry form are on the web page

www.databusiness.fi/en/challenge/experiments/ .

- 18:30 **Closing the event**

Who can participate?

Anyone except the members of 6Aika Open Data project.

The participants can be individuals, NGOs, organisations or businesses from Finland or abroad.

One team / participant can provide multiple competition entries.

Rules for participation

- The entry has to support one of the challenge themes: Active citizen or Functional city.
- The entry has to utilize at least one open datasets provided by the six cities.
- The entry must be created during this competition. The same solution can however be presented in another similar.

Evaluation criteria

- How creatively different data sources are used
- Usability & user friendliness
- The freshness of the idea
- Business potential
- Quality and sustainability
- How the idea / solution is compatible with the challenges
